Summary

Full-stack software developer with **around 2 years** of hands-on experience building, deploying, and maintaining web applications across the **MERN stack** (TypeScript, React, Node.js, Express, MongoDB) and **AWS**. Proven track record taking products from ground up to production with end-to-end ownership at NEO, delivering early-stage FinTech and AI-powered MVPs, resilient REST/GraphQL APIs, and third-party integrations. Author of **neo-mcp** on PyPI and npm with **45+ releases**, promoted from intern to full-time in three months.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frontend: React, Next.js, Redux, Tailwind CSS, WebSockets, responsive web design, client-side state management
Backend and APIs: Node.js, Express, FastAPI, RESTful APIs, GraphQL, webhooks, OAuth 2.0, JWT, Swagger/OpenAPI
Databases and Cloud: MongoDB (Mongoose, compound indexing, aggregation pipelines), Firebase/Firestore, PostgreSQL, Redis; AWS (Lambda, EC2, S3, API Gateway), Docker, CI/CD (GitHub Actions)
Architecture and Reliability: Third-party API integrations (payments, external feeds, OpenAI and Claude APIs), serverless deployments, circuit breakers, production debugging, monitoring, testing (Jest, pytest, vitest)

Experience

NEO (heyneo.com), AI engineering platform | **Full-Stack and AI Engineer** | Oct 2025 - Present | Jaipur, India
Promoted from Intern to Full-Time in 3 months

- **Led the v1-to-v2 REST API migration** end to end, engineering replacement Node.js and Express endpoints that restored core backend services and eliminated legacy technical debt.
- **Rebuilt the client-facing web application** in React and TypeScript against the v2 API, containerizing services with Docker and automating deployments via GitHub Actions.
- **Architected and maintain Node.js and MongoDB services**, writing Mongoose aggregation pipelines, Redis caching layers, and OAuth 2.0 authentication to secure and accelerate user requests.
- **Deployed and scaled backend infrastructure on AWS**, provisioning EC2 instances, S3 asset storage, and API Gateway endpoints to support production workloads with zero deployment downtime.
- **Eliminated recurring manual restarts** on a production service by diagnosing connection-pool exhaustion and shipping idempotency-safe retries across **five releases in one day**.
- **Built NeoClaw**, integrating Telegram, WhatsApp, Slack and Discord webhooks with an LLM agent loop to execute asynchronous tasks across **50+ tools**.
- **Published and maintain neo-mcp** on PyPI and npm across **45+ releases**, providing structured tool schemas and error contracts tested across **700+ automated tests**.
- **Migrated the NEO documentation site** to Next.js and Nextra, restructuring content for developer discoverability and search at docs.heyneo.com.

Celebal Technologies | **Backend Intern** Jun - Aug 2024; **Data Science Intern** Oct 2024 - Feb 2025 | Jaipur, India

- **Built REST and GraphQL APIs** in Node.js and Express for an e-commerce platform, implementing authenticated CRUD routes, webhooks, and payment documentation.
- **Built ML and NLP classification pipelines** that extract structure from unstructured text, using scikit-learn and pandas.

Selected Projects

BloombergTerminal: real-time financial market terminal | GitHub | Node.js, React, Redis, WebSockets

- **Integrated three financial market-data APIs** into a unified service layer, wrapping external endpoints in circuit breakers to ensure zero UI freezes during vendor outages.
- **Streamed live quotes over WebSocket** through Redis pub/sub with a **100 ms batch flusher**, deploying the multi-service application via Docker Compose.

DocuMind AI: hybrid GraphRAG document assistant | live | GitHub | Next.js, FastAPI, ChromaDB

- **Built an AI-powered MVP** fusing vector search, BM25, and knowledge-graph traversal with cross-encoder reranking, reaching **+183% Recall@10** over a vector-only baseline.

Coding Agent: autonomous CLI coding agent | GitHub | TypeScript, Node.js

- **Engineered a CLI coding agent** on a hand-written execution loop with no orchestration framework, applying repository-wide changes verified across **1,300+ tests**.
- **Placed every destructive command behind a permission gate**, with automated git rollback snapshots and AST blast-radius analysis before refactors are applied.

Education

JECRC University | *B.Tech, Computer Science and Engineering* | CGPA 8.6/10 | 2022 - 2026
